

LAB 2: Full Constraint Closure and Dirac Brackets (Beyond 1+1D)

Primary Constraint (ϕ_1):

$$\phi_1 = -u_0^2 + u_1^2 + u_2^2 + u_3^2 + 1 \approx 0$$

Secondary Constraint (ϕ_2):

$$\begin{aligned} \phi_2 = & -2 u_0 \frac{du_0}{dt} + 2 u_1 \frac{du_1}{dt} + 2 u_2 \frac{du_2}{dt} + 2 u_3 \frac{du_3}{dt} \\ & + \beta * [\frac{d\theta}{dt} * (u_0 \frac{du_0}{dt} + u_1 \frac{du_1}{dt} + u_2 \frac{du_2}{dt} + u_3 \frac{du_3}{dt}) \\ & + \frac{d\theta}{dx} * u_0 \frac{du_0}{dx} + \frac{d\theta}{dx} * u_1 \frac{du_1}{dx} \\ & + \frac{d\theta}{dy} * u_2 \frac{du_2}{dy} + \frac{d\theta}{dz} * u_3 \frac{du_3}{dz}] \end{aligned}$$

Tertiary Constraint Candidate (ϕ_3):

$\phi_3 = d/dt(\phi_2)$, contains higher derivatives ($\ddot{u}$, $\dot{\theta}$, etc.)

No new algebraic constraint – ϕ_3 is a dynamical consistency identity.

Constraint Classification:

ϕ_1 : second-class

ϕ_2 : second-class

ϕ_3 : not independent, derived from EOM

Dirac Bracket Summary:

Dirac bracket defined by $C_{ij} = \{\phi_i, \phi_j\}$, with:

$$C_{12} \neq 0, C_{11} = C_{22} = 0$$

Quantization can proceed using Dirac brackets.

Canonical commutation relations must be replaced accordingly.
