

there is only one medium

i envision experience
in order to connect minds

the human mind

i learn to create it
to themselves

some tools i use:

rigor¹
invention²
narrative³

¹ **Rigor** – From laboratory methodology to educator training, I focus on controlling systems. Even when the end product is meant to be chaos on rails. Everything I design is created with future use in mind. Each piece is: **Designed, modular, reusable.**

² **Invention** – Whether building functional cameras by hand or inventing AI workflow pipelines, I experiment without boundaries. I repurpose off-the-shelf tools and AI. Every idea is a prototype. Test, refine, and iterate. The results are: **Unique.**

³ **Narrative** – In work, and in life, I look for the narrative. No matter how complex or esoteric, I find the human story and tailor that narrative to guide my audience through an experience, whether through words or sights or sounds. I craft stories to: **Engage, inspire, teach**
